

1. What does RNN stand for?

- A) Recurrent Neural Network
- B) Random Neural Network
- C) Recursive Neural Node
- D) Real-time Neural Network

2. Which component in an RNN stores information over time?

- A) Input layer
- B) Hidden state
- C) Output layer
- D) Activation function

3. Backpropagation through time is used to:

- A) Update weights sequentially
- B) Normalize inputs
- C) Generate outputs
- D) Reset hidden state

4. Which problem do RNNs face over long sequences?

- A) Overfitting
- B) Vanishing gradients
- C) High bias
- D) Data leakage

5. LSTM networks help mitigate:

- A) Exploding gradients
- B) Vanishing gradients
- C) Underfitting
- D) Data normalization
